                                                                                                                         The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (X1) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                   Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                 Gaps

target binding sequence of an oligonuclectide chosen from any one of the carget binding sequence of an oligonuclectide chosen from any one of the calculation of detection reaction. Also described (1) a kit (XI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification creation; and (b) detecting the amplified target sequence. (I), (MI) and (XI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral sensitively and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polymuclectide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   target binding sequence of an oligonucleotide chosen from any one of the los sequence of ABBS6772 to ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (X1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                   The invention relates to an oligonucleotide (I) consisting of: (a) the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an oligonucleotide (I) consisting of: (a)

Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS676 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting the amplified target sequence. (I), (M1) and specifically and selectively recognizes the enterovirus genome. (I)
to AEBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral persent sequence represents a viral S' untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.

Also described: (1) akit (X1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEB56764 to AEB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence: (I), (M1) and (M1) are useful for detecting enterovirus target sequence: (I), (M1) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serctypes. The present sequence represents a viral 5' untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

prostate, colorectal, hepatocellular, bronchial (claimed). (Updated on 15-SEP-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents domains V-VI of the internal ribosomal entry site (IRES) of PVI(prr), a recombinant, non-pathogenic oncolytic poliovirus that carries the IRES of poliovirus type I Mahoney where the terminal loop of regions of Gomain V and domain VI are substituted with the corresponding fragments of human rhinovirus type 2 (HRV2). PVI(prr) was characterized by a loss of neuropathogenicity, demonstrated by its reduced ability to propagate within cells of neuronal origin and failure to cause neurological disease in Cal55 tg mice. Oncolytic potential was demonstrated against a panel of malignant cell lines. PVI(prr) is an example of novel recombinant polioviruses (I) of the invention in which the IRES of wild-type poliovirus is exchanged with the IRES of another picornavirus, such as HRV2, and optionally the PI, P3 or 3' untranslated region is exchanged with that of Sabin poliovirus. (I) are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           recombinant poliovirus useful for treating malignant tumors

```
target binding sequence of an oligonucleotide chosen from any one of the lo sequence of ABB5672 to ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more contains that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB5674 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequence. (1) sepectically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5, untranslated polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an oligonucleotide (I) consisting of: (a) the
                                                                                                                                                                                                                         Human coxsackievirus B1 5' untranslated polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present sequence represents a viral 5' untranslated polynucleot
sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 180 BP; 37 A; 48 C; 47 G; 48 T; 0 U; 0 Other;

```
The invention relates to an oligomucleotide (I) consisting of: (a) the target binding sequence of an oligomucleotide chosen from any one of the target binding sequence of ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (MI) and (KI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral senotives and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 20; DB 14; Length 198;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method for depositing a spot on a substrate, containing a sample for study, comprising preparing the sample in a liquid vehicle together with a magnetic support, to be deposited on the surface of a substrate as a droplet. The sample bonds to the magnetic support as particles. The sample material for analysis/ detection/ quantification can be cells, organisms, viruses and bacteria, antibodies, antibody fragments, antigens, haptens, lectins, sugars, RNA and DNA, proteins, hormone receptors, natural or synthetic molecules and macro molecules, and the like. The present oligonucleotide from Poliovirus type 3 was used in an example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                             Preparing a spot on a substrate surface, the sample is contained within a
liquid with magnetic particles to be deposited as a droplet, to be dried
together with a magnetic field to distribute the particles/molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 20; DB 10; Length 195; 100.0%; Pred. The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB56762 to ABB56771; and (b) a sequence required for selected amplification or detection. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB5674 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

ö
(K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target blinding sequence of any one of AEBS6774 to AEBS6771 and optionally a sequence required for selected amplification reaction, and (b) detecting the amplified target sequence. (I), (M1) and (M1) are useful for detecting enterovirus target sequences. (I), (M1) and (M2) are useful for detecting enterovirus target sequences. (I), (M3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               target binding sequence of an oligoniclectide chosen from any one of the 10 sequence of ABB56721; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more contains that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying consisting essentially of target indication primer having a sequence consisting essentially of target hinding sequence of any one of ABB5676 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus sequence. (1), sepecifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an oligonucleotide (I) consisting of: (a) the
                                                                                                                                               specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes.
                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                  present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the consequence of ABBS6772 to ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequence. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral sensitively and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polymucleotide greunce given in the exemplification of the present invention.
                                                                                                                                                           ö

The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting enterovirus target sequence. (I), specifically and selectively recognizes the enterovirus genome. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus recorring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                 Human coxsackievirus B2 5' untranslated polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence given in the exemplification of the present invention

target binding sequence of an oligonuclectide chosen from any one of the losquence of ABB5762 to ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) at kit (X1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence of the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB5674 to ABB56771 and optionally a sequence required for selected amplification creation; and (b) detecting the amplified target sequence. (1) (M1) and (X1) are useful for detecting enterovirus target sequence. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral present sequence represents a viral 5' untranslated polymuclectide sequence represents a viral 5' untranslated polymuclectide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an oligonuclectide (I) consisting of: (a) the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB567762 to ABB56771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprishing (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequences. (1) sensitively and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral contains and contains and contains a fewer than 500 copies of enterovirus contains and contain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 20; DB 14; Length 237; Pred.                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                            The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the target binding sequence of ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequences. (1) specifically and selecting enterovirus target sequences. (1) specifically and selection of broad range of enterovirus serotypes. The present sequence represents a viral 5 untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                          ö

The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (XI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEBS6764 consisting essentially of target binding sequence of any one of AEBS6764 consisting and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (XI) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The presents sequence represents a viral 5, untranslated polymuclectide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ARBS6762 to ARBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) and (KI) comprising (I), and one or more container that contains (I); and (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
detecting target, useful for detecting enterovirus nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;

ö
detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ARBS6764 to ARBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and specifically and selecting enterovirus target sequence. (1), (M1) and specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serostypes. The segmence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6762 to ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification exaction, and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting enterovirus target sequence. (I) sepecifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genome and allows detection of broad range of enterovirus serotypes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an oligonuclectide (I) consisting of: (a) the target binding sequence of an oligonuclectide chosen from any one of the 10 sequence of ARB56762 to ARB56771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ARB56764 to ARB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (M1) are useful for detecting enterovirus target sequences. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ٠.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amplifying or acids.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              l range of enterovirus serotypes.
5' untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes.
present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                  ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the consequence of ABBS6712 to ABBS671; and (b) a sequence required for selected amplification or detection. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovitus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEBS676 to ABBS671 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and selectively recognizes the enterovirus genome. (I) genome and allows detection of broad range of enterovirus serotypes. The presents sequence represents a viral 5, untranslated polymorleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequence given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 20; DB 14; Length 237;

target binding sequence of an oligonucleotide chosen from any one of the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB5762 to ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) at kit (XI) comprising (II), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence or onsisting essentially of target binding sequence of any one of ABB5674 to ABB5671 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (MI) and (XI) are useful for detecting enterovirus target sequence. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral present sequence represents a viral 5' untranslated polymucleotide represents a viral 5' untranslated polymucleotide sequence given in the exemplification of the present invention.

```
The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of AEB56762 to AEB56771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEB56764 to AEB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting enterovirus target sequences. (I), (M1) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The
                                                                                                                                                                       Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score 20; DB 14; Length 237;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an oligonuclectide (I) consisting of: (a) the target binding sequence of an oligonuclectide chosen from any one of the 10 sequence of ABS5715 to ABS571; and (b) a sequence required for cleared amplification or detection. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABS576 to ABS571 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting enerovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus presents equence represents a viral 5' untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels 0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ouery Match

                                                                                                                                                                                                      à
        The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6712 to ABBS6711, and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS676 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (MI) and (XI) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral senome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5 untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of AEB56762 to AEB56771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of AEB56764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                 Gaps

trarget binding sequence of an oligonucleotide (1) cubisticing of the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB5672 to ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (X1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence of the target sequence using first amplification primer having a sequence (1) consisting essentially of target binding sequence of any one of ABB5674 to ABB5671 and optionally a sequence required for selected amplification reaction, and (b) detecting the amplified target sequence. (1) (M1) and (X1) are useful for detecting enterovirus target sequences. (1) specifically and selectively recognizes the enterovirus genome. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral present sequence represents: a viral 5' untranslated polynucleotide sequence represents: a viral 5' untranslated polynucleotide sequence civen seamplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
to AEB56771 and optionally a sequence required for selected amplification reaction, and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequences. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an oligonucleotide (I) consisting of: (a) the

Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764 to ABB56771 and optionally a sequence required for selected amplification reaction, and (b) detecting the amplified target sequence. (I), (M1) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Jonucleotide comprising sequences for binding and amplifying or target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynuclectide sequence given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to AEBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting enterovirus target sequences. (I)
                                                                                                                                                                                                                                                                                                                                                The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB56762 to ABB56771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         l range of enterovirus serotypes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AEB56782/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6712 to ABBS6712 and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS674 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (MI) and (KI) are useful for detecting enterovirus target sequences. (I) specifically and selecting enterovirus target sequences. (I) specifically and selecting enterovirus target sequence. (I) specifically and selecting enterovirus target sequence. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral senome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.

The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6712 to ABBS6713, and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting enterovirus target sequence. (I), (M1) and (K1) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serocrypes.
                                                                                                                                                                                                                                                                  Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                       Disclosure; Fig 1A-D; 34pp; English

                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABS5775 to ABS5771; and (b) a sequence required for calcated amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABS5764 to ABS5771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequence. (1) specifically and selectively recognizes the enterovirus genome. (1) specifically and relatively tecognizes the enterovirus genome. (1) specifically and relatively the amplified target sequence. (1) specifically and relatively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The presents sequence represents a viral 5, untranslated polymorlectide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                    Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB56762 to ABB56771; and (b) a sequence required for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                            sequence given in the exemplification of the present invention

ö
selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence is the target sequence are amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB5676 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting the emplified target sequence. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        target binding sequence of an object of the sequence from any one of the lose sequence of ABBS672 to ABBS671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS674 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (M1) and (K1) are useful for detecting the amplified target sequences. (I), (M1) and specifically and selectively recognizes the enterovirus genome. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an oligonucleotide (I) consisting of: (a) the

The invention relates to an oligonucleotide (1) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the target binding sequence of ABBS6771; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (1), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (1), (M1) and (X1) are useful for detecting enterovirus target sequences. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral cgenome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polymucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                           ö
genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AEB56826
```

```
The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the target binding sequence of ABBS6772 to ABBS6771; and (b) a sequence required for selected amplification or detection. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (I); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (M1) and (K1) are useful for detecting enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral sensitively and rapidly detects fewer than 500 copies of enteroviral spenance represents a viral 5' untranslated polymucleotide present sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                        Human coxsackievirus B5 5' untranslated polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

target binding sequence of an oilgonucleotide chosen from any one of the sequence of ABB5072 to ABB5071; and (b) a sequence required for selected amplification or detection reaction. Also described: (l) a kit (KI) comprising (l), and one or more contains that contains (l); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABB56774 to ABB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (l) (MI) and specifically and selecting enterovirus target sequence. (l) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the carget binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABB5672 to ABB5671; and (b) a sequence required for selected amplification or detection reaction. Also described: (1) a kit (XI) comprising (II), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence of consisting essentially of target binding sequence of any one of ABB5674 to ABB5671 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (MI) and (XI) are useful for detecting enterovirus target sequence. (I) sensitively and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
                                                                                            Human coxsackievirus B4 5' untranslated polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human coxsackievirus B4 5' untranslated polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                              The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ABBS6712 to ABBS671; and (b) a sequence required for selected amplification or detection reaction. Also described: (I) a kit (KI) comprising (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ABBS6764 to ABBS6771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I) (MI) and (XI) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) specifically and rapidly detects fewer than 500 copies of enteroviral sensitively and rapidly detects fewer than 500 copies of enteroviral present sequence represents a viral 5° untranslated polynucleotide present sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                         Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.

The invention relates to an oligonuclectide (I) consisting of: (a) the target binding sequence of an oligonuclectide chosen from any one of the 10 sequence of ARB56762 to ARB5671; and (b) a sequence required for selected amplification or detection. Also described: (I) a kit (KI) comprishing (I), and one or more container that contains (I); and (2) detecting (MI) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence consisting essentially of target binding sequence of any one of ARB5674 to ARB56771 and optionally a sequence required for selected amplification reaction; and (b) detecting the amplified target sequence. (I), (MI) and (KI) are useful for detecting enterovirus target sequences. (I) specifically and selectively recognizes the enterovirus genome. (I) sensitively and rapidly detects fewer than 500 copies of enteroviral manner and application and the fourty fewer than 500 copies of enteroviral manner and application and the fourty and rapidly characterial and selectively an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an oligonucleotide (I) consisting of: (a) the target binding sequence of an oligonucleotide chosen from any one of the 10 sequence of ARB56762 to ARB56712. As a sequence required for selected amplification or detection reaction. Also described: (1) a kit (K1) comprising (I), and one or more container that contains (1); and (2) detecting (M1) an enterovirus target sequence, involving: (a) amplifying the target sequence using first amplification primer having a sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel oligonucleotide comprising sequences for binding and amplifying or detecting target, useful for detecting enterovirus nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence given in the exemplification of the present invention

                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                 ö
consisting essentially of target binding sequence of any one of AEBS6764 to AEBS6771 and optionally a sequence required for selected amplification reaction, and (b) detecting the amplified target sequence. (1), (M1) and (K1) are useful for detecting enterovirus target sequences. (1) specifically and selectively recognizes the enterovirus genome. (1) sensitively and rapidly detects fewer than 500 copies of enteroviral genome and allows detection of broad range of enterovirus serotypes. The present sequence represents a viral 5' untranslated polynucleotide sequence given in the exemplification of the present invention.
